

Pre-De-Icer: Patent-Protected, Smarter Ice Prevention

Key Benefits:

- Designed for bridges and overpasses — the most dangerous freeze-prone locations.
- Thick, honey-like viscosity clings to surfaces and resists rain wash-off.
- Extreme cold performance — proven effective down to -51°F (new formula to -82°F).
- Eco-safe and salt-free — protects vehicles, concrete, and waterways.
- Longer-lasting protection reduces truck trips, fuel, and labor costs.

Never Scrape Again:

Windshields are one of the biggest opportunities for Pre-De-Icer. **Apply before the storm and eliminate scraping entirely.** Drivers simply turn on the wipers and go — with clear visibility from the first minute. Safe for paint, wipers, and trim, making it a natural fit for companies like [WeatherTech](#).

Additional Niches:

- Sidewalks & driveways — safe for concrete and landscaping.
- Boat docks & boats — prevents ice build-up that can cause damage or capsizing.
- Roofs — helps prevent ice dams and snow-load collapses.
- Power lines & equipment — reduces storm outage risks.
- Trucking & fleets — keeps steps, mirrors, and latches ice-free.
- Aircraft & airports — potential for safer, longer-lasting de-icing.
- Government & military applications — for mission-critical infrastructure and equipment.

How Pre-De-Icer Compares:

	Pre-De-Icer	Salt / Brine	Methanol Spray
Cling & Wash-off	Stays in place, film-forming	Thin, washes off easily	Evaporates quickly
Cold Performance	-51 °F (-82 °F new formula)	Stops working ~27 °F	Limited (frost only)
Eco-Impact	Salt-free, safe for infrastructure	Corrosive to bridges & cars	Harsh on paint & trim
Re-Application	Single pre-storm treatment lasts	Requires multiple passes	Requires repeated spraying
