

Why Pre-De-Icer Matters

Exclusive IP & New Formula – Effective to -82°F with a fresh 20 years of patent protection. Dual patents create a superior, defensible product vs. anything on the market.

Safety in Danger Zones – Concentrated on bridges, overpasses, and other danger zones where most ice-related accidents occur. This is not just a U.S. issue — it's a global problem.

Vehicle & Property Safe – Safe on clear coat paint, wipers, and locks. Works for

driveways, walkways, dealer lots, rental fleets, roofs, and boat docks.

Corrosion & Cost Savings – Reduces repeated applications, saving on fuel and labor while avoiding the \$5B+ annual corrosion damage caused by road salt.

Massive Global Opportunity – Applications in automotive, municipal, aviation, trucking, nautical, and military markets with multi-billion recurring demand.

Special Notation – The Windshield Market

The global automotive de-icer market is ~\$2B annually. Pre-De-Icer doesn't just compete — it is a superior product to what exists today and, in many ways, will create a new shelf category.

Apply before a storm, snow never bonds, and windshields clear instantly with a swipe of the wipers. It also prevents blades from freezing mid-drive, eliminating the danger of reaching outside to knock ice off the wiper blade.

No current product — not salt sprays, not beet juice blends, not Prestone's offerings — delivers this level of effectiveness for the windshield market.
