

What This Is:

This is a very basic financial projection worksheet. The idea is to estimate your sales, and your expenses on a monthly basis. By subtracting expenses from sales, we estimate net profit.

Note that this is a VERY BASIC project. In the real world you might have numerous SKUs and price points, and a variety of other factors that complicate this. But this spreadsheet is intended to allow you to ballpark things at least, to make sure you can see a future for your business, in basic terms.

How To Use It:

This copy is read-only, so you need to make a copy for yourself. To do that, choose "File...Make A Copy" in the menu above, and save a copy for yourself on Google Drive. Then you will be able to enter your own figures, etc.
